

FIYMA Program

29.06.2026

FIYMA Reporting Requirements, Schedule & Templates

JOYCE KAMANDE, MESPT

Reporting Requirements: What is effective Reporting?

- ❑ **Reporting** is the systematic compilation, analysis and communication of programme information **to demonstrate implementation progress, results achieved, financial performance, compliance, risks, learning** and contribution towards enabling financially disadvantaged young women and men to access dignified and fulfilling work.
- ❑ **It involves systematic process of collecting, analyzing, documenting and communicating programme performance, results, risks, learning and accountability information** to support evidence-based decision-making, adaptive management and accountability to stakeholders.
- ❑ **Examples of effective Vs ineffective reporting**

Example 1:

Ineffective

"Loans were issued successfully."

Effective

"KES 18 million was disbursed to 420 young women and men through five SACCOs. The repayment rate reached 97%, Portfolio at Risk over 30 days (PAR30) remained below the programme threshold, and 68% of borrowers invested in enterprise expansion."

Example 2:

Ineffective

"Five training sessions were conducted for 250 participants."

Effective

"Five business development training sessions were delivered to 250 young women and men. Post-training assessments showed that 82% improved their business planning skills, and 145 participants subsequently accessed SACCO loans to invest in agricultural enterprises."

Reporting Purpose: Why should we report?

Reporting enables the program to:

- Monitor progress against the programme Results Framework and Theory of Change.
- Demonstrate accountability to the donor, consortium partners and governance structures.
- Track delivery of outputs, outcomes and impact.
- Monitor financial performance and utilization of programme resources.
- Assess performance of SACCOs, Market Actor MSMEs and youth groups.
- Monitor loan portfolio performance and financial inclusion outcomes.
- Measure dignified and fulfilling work outcomes.
- Identify implementation challenges, risks and safeguarding issues.
- Generate evidence for adaptive management and continuous improvement.
- Capture lessons learned, innovations and good practices for scaling

FIYMA Reporting Requirements

All reports submitted under FIYMA should:

- ❑ Be **accurate, complete, and evidence-based**.
- ❑ Follow **approved reporting templates** and **indicator definitions**.
- ❑ Be supported by **verifiable source documents** and **comply with data quality standards**.
- ❑ Include **quantitative results, qualitative analysis, implementation challenges, mitigation measures, risks, lessons learned and proposed adaptive actions**.
- ❑ Be submitted **strictly** within **agreed reporting timelines**.
- ❑ Present data disaggregated by **sex, absolute age, disability status, refugee status, county, value chain, and enterprise level, partner type etc**.
- ❑ Supports both **accountability to the Mastercard Foundation** and **adaptive management**, by ensuring that programme decisions are driven by timely, high-quality evidence

Types of Reporting + Frequency

Reporting Requirement	Key Reporting Elements	Primary Reporting Entity	Frequency
Programme Performance Reporting	Activities implemented, milestones achieved, deliverables completed, implementation progress against work plans, challenges, mitigation measures	All Consortium Partners	Monthly / Quarterly
Loan Portfolio Reporting	Loans disbursed, loan uptake, repayment performance, Portfolio at Risk (PAR30), default rates, loan recovery, outreach to young women and men	MESPT/ SACCOs	Monthly
Results Reporting	Output and outcome indicators, beneficiaries reached, enterprises supported, work opportunities created/improved, progress towards dignified and fulfilling work	All Consortium Partners	Quarterly
Programme participants Reporting (young people,	Number of young women and men reached, enterprise profiles, jobs created, jobs improved, income changes, participation in programme services	Implementing Partners	Quarterly
Institutional Performance Reporting	SACCO governance, cooperative performance, youth group organizational capacity, policy compliance, institutional strengthening milestones	SACCOs, Cooperatives, Youth Groups	Quarterly

Types of Reporting + Frequency

Reporting Requirement	Key Reporting Elements	Primary Reporting Entity	Frequency
Financial Reporting	Budget utilization, expenditure, fund disbursement, burn rate, variance analysis, forecast expenditure	Consortium Partners	Monthly / Quarterly
Safeguarding and GESI Reporting	Safeguarding incidents, case management, complaints received and resolved, gender equality, disability inclusion, refugee inclusion	All Partners	Monthly / Immediate for serious incidents
Risk Reporting	Programme implementation risks, financial, operational risks, reputation, safeguarding and mitigation actions	Consortium Partners	Monthly/Quarterly
Learning and Adaptive Management Reporting	Lessons learned, innovations, success stories, evidence generated, adaptive management actions	Consortium Partners	Quarterly
Data Quality Reporting	Data verification results, DQA findings, completeness, accuracy, consistency, timeliness, corrective actions	MEAL Team	Quarterly
Communication and Visibility Reporting	Communication products, media coverage, stakeholder engagement, branding compliance, knowledge products	Consortium Partners	Monthly/Quarterly

in partnership with

FIYMA PROGRAMME – REPORTING, FINANCIAL & MEL FLOW AND ANNUAL REPORTING CYCLE

Reliable Data → Ratified Reports → Strong Accountability → Better Decisions → Greater Impact for Young Women and Men

Common Reporting Weaknesses & Likely consequences

Common reporting mistakes

Different consortium partners interpreting indicators differently.

Reporting activities instead of outcomes.

Counting participants multiple times- duplicate records

Weak documentation for verification/ non-verifiable results.

Poor linkage between narrative and result framework.

Financial and technical reports that are not reconciled.

Lessons learned reported without explaining how they informed programme adjustments.

Reporting outputs without linking them to the Theory of Change.

Consequences of weak Reporting

- Poor management decisions.
- Reduced confidence from the donor and partners.
- Delayed identification of implementation challenges.
- Weak adaptive management.
- Inability to demonstrate contribution to the program's impact.
- Increased audit and compliance risks.
- Reduced credibility of programme results.

Data + Reporting Compliance Requirements.

1. Reporting compliance

- Alignment with: Shared Measures 2.0 definitions and indicators
- Foundation reporting systems (FLUXX, DPO)
- Required: Periodic submissions (monthly, quarterly, annual)
- Disaggregated reporting

2. Data governance and integrity

- Secure systems (MIS, Kobo, FLUXX)
- Controlled access and audit trails
- Backup and recovery protocols
- Data protection and confidentiality enforcement

3. Indicator compliance

- Follow standard definitions (SM2.0)
 - Use: Correct classifications (e.g., Urban, Periurban, Rural, WEO vs YiW)
- E.g. Verified outcome criteria 90-day income confirmation

4. Inclusion and safeguarding compliance

- Mandatory tracking of young women centric approach (80% young women, Person with disabilities & Refugees)
- PWDs, refugees, vulnerable groups
- Safeguarding reporting required in monthly reports
- Feedback mechanisms must be documented and acted upon

Data quality Standards + Quality Management Plan (DQM)

	Definition (FIYMA context)	Quality Standard (Minimum Threshold)	Quality Control Mechanism	Assessment Frequency
ACCURACY	FIYMA data correctly represents what actually happened. No inflation of numbers. YiW counts only confirmed participants.	≥95% of data entries verified against source documents in spot checks; 100% of YiW counts have confirmed 90-day follow-up	1. Random Spot-checks: MEAL officers verify 10% random sample quarterly. 2. YiW follow-up audit: 100% of YiW records must have follow-up confirmation. 3. Annual full data audit.	Quarterly (spot-check) + Annual (full audit)
COMPLETENESS	All required data fields captured for all participants. WGQ disability module completed for ALL registered individuals. Unique Participant ID on every record.	100% of mandatory fields complete. 100% of participants have WGQ completed. 100% of records have Unique Participant ID. <2% missing optional fields.	1. Mandatory field validation in KoboToolbox (WGQ, Unique ID, sex, age, geographic context cannot be skipped). 2. Weekly automated completeness report from MIS. 3. Monthly partner completeness review.	Weekly (automated) + Monthly (review) + Quarterly (audit)
TIMELINESS	Data captured and reported within defined timeframes. 90-day YiW follow-ups completed on schedule.	100% of partner quarterly data submissions within 15 days of quarter end. 100% of 90-day follow-ups completed on schedule or documented as lost to follow-up.	1. Reporting calendar shared with partners at programme start. 2. Automated reminders at 14, 7, and 2 days before deadline. 3. YiW follow-up due date tracked in YiW Register.	Monthly (submission tracking) + Quarterly (timeliness report)
CONSISTENCY	Data measured and reported in same way across all partners. WEO boundary applied uniformly using same Decision Tree.	Zero discrepancies between partner-reported data and central MIS. 100% of WEO records classified using WEO Decision Tree (same criteria across all 4 partners).	1. WEO Decision Tree (new V4 sheet) as authoritative WEO boundary tool — all partners use same tool. 2. Quarterly cross-partner consistency checks. 3. Annual inter-rater reliability test for WEO classification.	Quarterly (cross-partner check) + Annually (full review)

Data quality Standards + Quality Management Plan (DQM) Cont'd

DQ Dimension	Definition (FIYMA context)	Quality Standard (Minimum Threshold)	Quality Control Mechanism	Assessment Frequency
INTEGRITY	Data protected from unauthorised access, manipulation, or loss. Audit trail maintained.	Zero unauthorised access/modification incidents. 100% of records with audit trail. Daily backup operational.	1. Role-based access controls in MIS. 2. Audit trail for all data modifications. 3. Encrypted storage. 4. Daily off-site backup. 5. Annual IT security assessment.	Weekly (backup) + Monthly (audit trail) + Annually (security)
DISAGGREGATION (SMF 2.0 — Card 5)	All FIYMA data collected and reported broken down by ALL MCF Fluxx required fields: sex, age band, rural/urban/peri-urban, disability (WGQ), displacement status, INTERVENTION TYPE (new V4 requirement).	100% of participant-level indicators disaggregated by all 6 required fields. Zero MCF Fluxx reports submitted with missing disaggregation fields.	1. ALL 6 disaggregation fields mandatory in KoboToolbox forms (cannot be skipped). 2. Fluxx disaggregation completeness check before every submission. 3. Monthly audit of disaggregation compliance.	Monthly (compliance) + Before each MCF submission
ANTI-DOUBLE COUNTING (Card 4)	Each individual, enterprise, or group counted ONCE across all services, all partners, and all reporting periods. WEO figures unduplicated.	Zero verified double-counting instances. 100% of WEO records linked to Unique Participant ID. Cross-partner dedup check shows zero duplicates monthly.	1. Unique Participant ID (NatID+Phone4) system enforced across all 4 partners. 2. Monthly automated dedup check (15th of month). 3. Cross-partner dedup reconciliation quarterly. 4. Manual spot audit annually.	Monthly (automated dedup) + Quarterly (cross-partner) + Annually (full audit)

Data quality Standards + Quality Management Plan (DQM) Cont'd

DQ Dimension	Definition (FIYMA context)	Quality Standard (Minimum Threshold)	Quality Control Mechanism	Assessment Frequency
WEO BOUNDARY COMPLIANCE (Card 1)	WEO counts include ONLY individuals directly receiving work-enabling services. Mobilisation events, awareness sessions, and WhatsApp broadcasts are NEVER counted as WEO.	100% of WEO records have WEO Classification field = 'WEO-qualifying'. Zero records from mobilisation/awareness events in WEO totals.	1. WEO Classification field mandatory in Outreach Tracker. 2. WEO Decision Tree applied at data collection — YECs trained on all 5 steps. 3. Quarterly WEO audit: sample 10% of records and verify WEO classification. 4. Annual cross-partner WEO boundary calibration exercise.	Quarterly (audit) + Annually (calibration)
YiW TRIGGER COMPLIANCE (Card 3)	YiW counts include ONLY participants with confirmed income from new/additional/improved work via 90-day post-intervention follow-up. Training completion or loan receipt alone does NOT count.	100% of Oc 3.1 YiW count has corresponding YiW Follow-up Register entry with status = Yes — income confirmed. Zero YiW counts without follow-up confirmation.	1. YiW Follow-up Register (new V4 sheet) as mandatory source for Oc 3.1 count. 2. Monthly YEC follow-up completion check. 3. Quarterly audit: all Oc 3.1 records cross-referenced with YiW Follow-up Register. 4. Annual YiW count verification by MESPT MEAL Manager.	Monthly (completion rate) + Quarterly (audit) + Annually (full verification)
PLAUSIBILITY	Ensures FIYMA results (loan uptake, business growth, job creation, training outcomes) are realistic given intervention type, value chain, and participant context	0 unexplained outliers All extreme values justified Results consistent with program logic (e.g., loans → gradual income growth)	1. Automated outlier detection rules in MIS (e.g. Unrealistic business growth, Sudden YiW spikes etc) 2. Quarterly trend analysis dashboards (compare current vs historical performance) 3. Benchmarking against targets and expected ranges 4. Flagging system for anomalies requiring explanation 5. Cluster-level performance benchmarking 6. Cross-partner comparison dashboards	Monthly (auto checks) + Quarterly (formal review)

Validating partner data, from source to FLUXX to BI

What “validation” means

Validation means data is complete, coherent, and traceable, before it is approved and rolls up to BI and leadership reporting

Where validation happens, end to end

Partner level: consent captured, definitions applied, records complete, deduplication done, supporting documents filed
Review level: checks in FLUXX for completeness, consistency, and alignment between narrative and numbers
Verification level: sampled traceability checks, source to report, confirm classification logic for YiW and WEO

Minimum “approval ready” requirements

- Indicator definitions and classification rationale are documented, especially YiW and WEO
- Mandatory disaggregation fields are complete enough to use
- Numbers reconcile, and match the story and ToC logic

What to do when validation fails

- Reach out to Partners to understand causes and discuss mitigations
- Correct and resubmit, when issues are formatting, missing fields, or minor inconsistencies
- Verify when anomalies are large or repeated
- Escalate, when there are credible integrity, safeguarding, consent, or compliance risks

What we really mean by data quality

Data quality is about trust, not perfection.

Key question:

“Would you feel confident using this data to make a decision?”

Simple checks:

- ✓ Completeness
- ✓ Consistency
- ✓ Plausibility
- ✓ Timeliness
